

The **SBA5 Series** from InteractiveMounts is an extremely agile universal mounting system for interactive boards. It has the same benefits and construction of our famous **SB3 Series**, yet has an adjustable depth feature for clearing obstructions such as oversized chalktrays. It provides 18" of vertical offset, matched with 3"-4.5" of horizontal depth-adjustment which allows the board to be mounted at a user-friendly height. The **SBA5 Series** allows an installer to mount an interactive board over an existing white/black board without causing damage to the underlying board. Clean, simple, and affordable. That's the **SBA5 Series!**

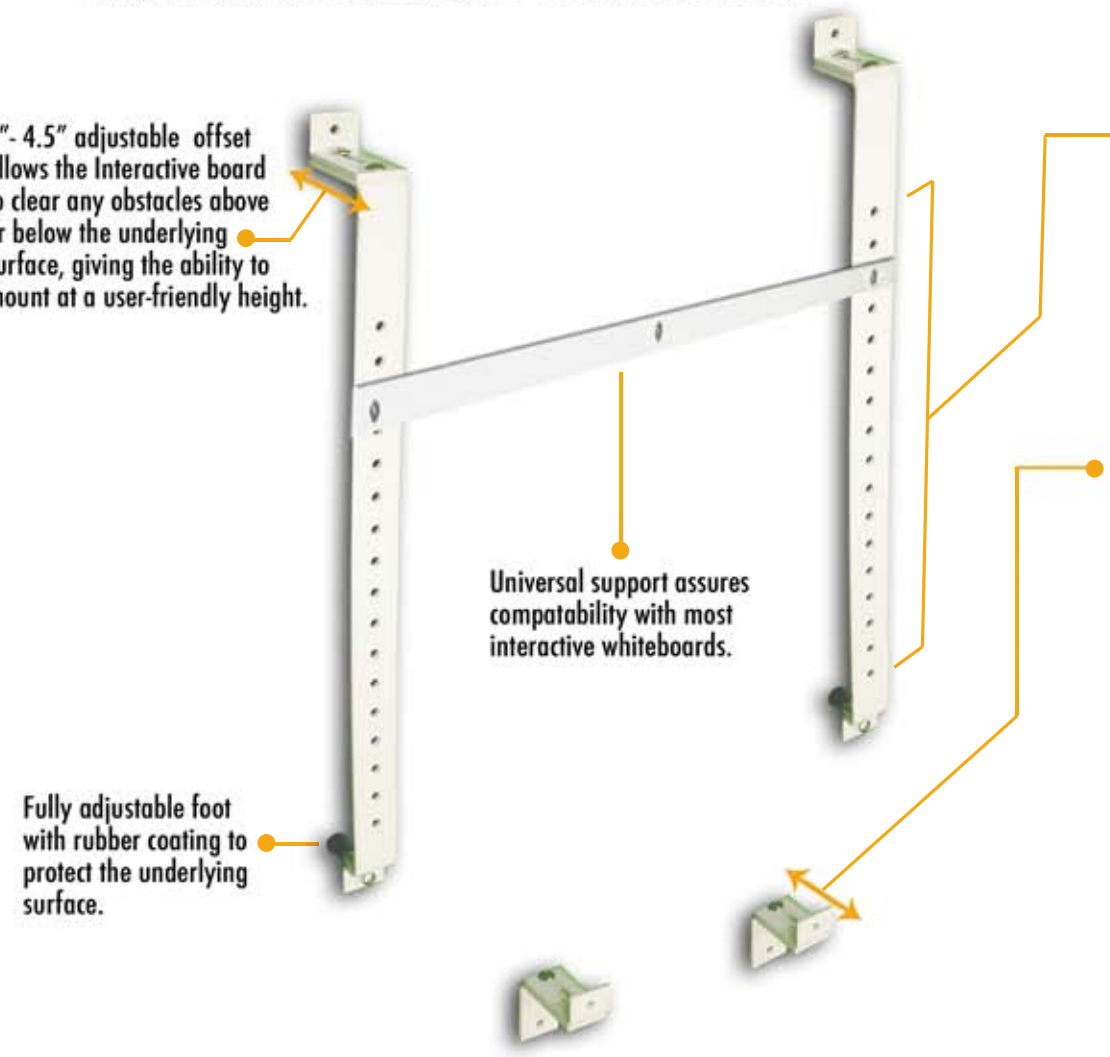

3" - 4.5" adjustable offset allows the Interactive board to clear any obstacles above or below the underlying surface, giving the ability to mount at a user-friendly height.

Easily adjust the mounting height of the interactive whiteboard with 18 inches of adjustability.

3" - 4.5" adjustable base plates securely fasten the bottom of the Interactive board while supplying enough clearance for any obstructions.

Universal support assures compatibility with most interactive whiteboards.

Fully adjustable foot with rubber coating to protect the underlying surface.
