

The **SBG5 Series** from InteractiveMounts is an extremely agile universal mounting system for interactive boards. It has the same benefits and construction of our famous **SBG3 Series**, yet has an adjustable depth feature for clearing obstructions such as oversized chalktrays. It provides 18" of vertical offset, matched with 3"-4.5" of horizontal depth-adjustment which allows the board to be mounted at a user-friendly height. The **SBG5 Series** allows an installer to mount an interactive board over an existing white/black board without causing damage to the underlying board. Clean, simple, and affordable. That's the **SBG5 Series!**

Adjustable nylon feet for leveling the projector mounting plate while protecting the underlying surface.

3"-4.5" adjustable offset allows the Interactive board to clear any obstacles above or below the underlying surface, giving the ability to mount at a user-friendly height.

Fully adjustable foot with rubber coating to protect the underlying surface.

Universal support assures compatibility with most interactive whiteboards.

3"-4.5" adjustable depth for projector mounting plate for matching the Interactive board depth offset.

Easily adjust the mounting height of the interactive whiteboard with 18 inches of adjustability.

3"-4.5" adjustable base plates securely fasten the bottom of the Interactive board while supplying enough clearance for any obstructions.
